PERSONAL CHECKS & BALANCES

# May 2026 Activity Report

A log of the engineering work shipped to the Agri360 CRM and surrounding applications during the first half of May 2026.

| 87 | 8 | 3 | 2 |
|---|---|---|---|
| COMMITS PUSHED | ACTIVE WORKDAYS | REPOS SHIPPED TO | NEW APPS LAUNCHED |

## EXECUTIVE SUMMARY

May to date has covered three streams: continued production work on the Agri360 CRM (52 commits), and the launch of two new standalone applications — **PostPilot**, a social-media scheduler (32 commits), and **Secretary-Transcribe**, an English/Afrikaans transcription tool now live at `translate-transcribe.proagrihub.com` (3 commits). The CRM's sister applications (checklist wizard, booking-form editor, e-sign page) required no further changes this month; the April pipeline reshuffle has stabilised in production.

INITIATIVE 1 · AGRI360

### Video Department redesign

Rebuilt the video shoots workflow end to end. Replaced the List view with a Calendar Month grid, kept Week view as a crew-load toggle, added per-shoot dashboards with a temperature-coded palette, migrated to the shared *proagri-sheet* component, made the pre-shoot checklist fully editable, enabled custom crew creation, added invoice uploads on expenses, and introduced a per-expense ledger sheet.

INITIATIVE 2 · AGRI360

### Agri4All product-uploads polish

Rewrote the AI autofill engine (description prompt, category enumeration, extras-leakage fix). Added a bulk per-image scrape + autofill flow, locked autofill state to prevent re-trigger races, built a per-image masonry layout, surfaced a website-URL field at the parent row, and added a POA price fallback with auto-resolved readiness gaps.

INITIATIVE 3 · AGRI360

### Content Calendar & Client List

Un-greyed the Content Calendar, fixed portal + editorial routing, added a new *Agri4All Scraped Products* tab, reordered the Design/CC columns for clarity, surfaced Monthly Posts in the details panel, and added an admin PATCH endpoint to reset a client's `last_scraped_at` + `last_scrape_status` when re-running an enrichment.

INITIATIVE 4 · AGRI360

### Deliverables & routing

Unlocked every wired deliverable type in `ENABLED_DELIVERABLE_TYPES` and wired its dashboard, department tab, activity log, and portal audit trail end to end. Synchronised three stale copies of `dashboardTypes` & dispatch logic that had been drifting since the April redesign.

INITIATIVE 5 · NEW APP

### PostPilot — social scheduler

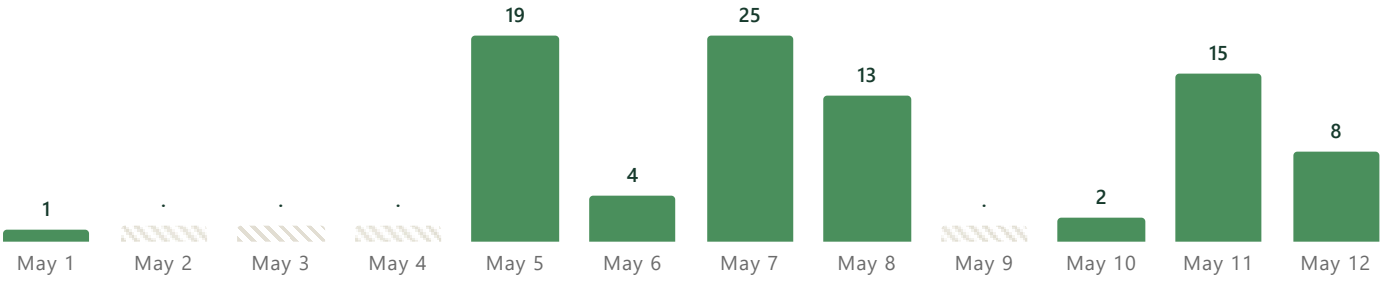

Scaffolded a Next.js / tRPC / BullMQ monorepo from zero to production in three days. Six build "waves": clients schema + editorial CRUD; posts / post_media / post_results schema; compose panel + per-client calendar; `social_accounts` + Meta OAuth + connections UI; BullMQ producer/worker pipeline with a `MetaPublisher`; and a media library (pivoted from MinIO to local-fs on a persistent volume after the original storage stack failed in deploy). Deployed to Coolify via docker-compose, with Caddy / Traefik routing debugged via proxy logs. Final touches: month/week/day calendar views with drag-drop, an all-client master calendar, and an archive confirmation modal.

INITIATIVE 6 · NEW APP

### Secretary-Transcribe

An English/Afrikaans transcription tool, now live at `translate-transcribe.proagrihub.com`. API key embedded server-side (removing client-side key entry for a frictionless UX), output extended to produce simplified Grade 3 Afrikaans alongside the English transcript.

## DAILY COMMIT VOLUME

## DAILY BREAKDOWN

| DATE | COMMITS | SUMMARY OF WORK SHIPPED |
|---|---|---|
| Fri 1 May | 1 | **Client-list UI overhaul.** Rebuilt the client-list page with auto-enrich on row hover; unified the checklist URL into a single source of truth. |
| Tue 5 May | 19 | **Three threads in parallel.**<br><br>**Content calendar / Design.** Reordered columns (eye, design avatar, company, service-right, status, advance), widened the action cell for breathing room, kept Monthly Posts visible in the details panel, made the whole dashboard scroll as one, moved material requests into the left column above team chat. Pulled `monthly_posts` through on the bulk routes and back-filled existing rows. Un-greyed Content Calendar, fixed portal + editorial routing, added the *Agri4All Scraped Products* tab.<br><br>**Agri4All product-uploads.** Masonry-style 2-column layout for cards 3–7 (no dead space), Card 7 Media primary-image fill, masonry-row sizing. Website-URL field on the parent row with `clients.website` as source of truth. Default category set to *Other* > *Services* when the AI mapper can't pick a leaf. POA price fallback + readiness pass with auto-resolved gaps. `item.metadata` hydrated after autofill so the dashboard sees the draft; autofill + post state persisted; parallel autofill races fixed. Bulk Run scrape+autofill rewritten to operate per-image instead of per-deliverable. Seller + scrape on the parent row, per-image post-to-Agri4All, autofill green lock, per-row autofill, prefilled checklist card, per-image seller picker, toolbar reorder, real form links.<br><br>**Admin + Clients.** Admin `PATCH` added to reset `last_scraped_at` + `last_scrape_status` on clients. Onboarded sheet restricted to the Signed Booking Form. Client-list made scrollable. Persisted `checklist_url` now preferred over the generic builder. |
| Wed 6 May | 4 | **Agri360 — Agri4All-links cleanup + Video redesign kick-off.** Delete UI added on the Agri4All-links rows with cascade fix and scrape `DELETE` endpoints. Video department redesign begun — shoots, crews, budgets.<br><br>**PostPilot — new product kickoff.** PostPilot monorepo scaffolded (wave 1); editorial-newsroom aesthetic applied in a first design pass. |

| DATE | COMMITS | SUMMARY OF WORK SHIPPED |
|---|---|---|
| Thu 7 May | 25 | **Highest-volume day of the month — three projects in parallel.**<br><br>**Agri360 — Video department fixes.** URL prefixes corrected, Inbox → Shoots handoff fixed, `openVideoDashboard` exported so the dashboard renders from external entry points.<br><br>**PostPilot — build waves 2–6 + production deploy.** Five build "waves" shipped in a single day: clients schema + tRPC router + editorial CRUD UI (wave 2); posts / post_media / post_results schema (wave 3); posts router + compose panel + per-client calendar + table (waves 3+4); `social_accounts` schema + Meta OAuth + connections UI (wave 5); BullMQ producer + worker pipeline + `MetaPublisher` (wave 6). Root Dockerfile unified with web + worker targets, switched to docker-compose deploy. Dropped a non-existent `public/` COPY (App Router uses `app/icon.svg` + `app/robots.ts`), exposed web port 3000, added explicit Traefik labels routing to `web:3000`, attached web to the external `coolify` network, set a Caddy label override pointing the reverse proxy at `web:3000`, switched to Next.js *standalone* output for the production runtime, re-enabled the worker after isolating a restart loop, and completed the full Caddy label set on the web service (Coolify app-level labels don't reach compose containers — root cause traced via proxy logs).<br><br>**Secretary-Transcribe — initial implementation.** English/Afrikaans transcription tool stood up at `translate-transcribe.proagrihub.com`: initial implementation; API key embedded server-side (client-side key entry removed); output extended to produce simplified Grade 3 Afrikaans alongside English. |
| Fri 8 May | 13 | **Agri360 — repo hygiene + Agri4All polish.** Tidied `.claude/` (stale agent stubs removed, `settings.local.json` untracked); dropped unused `checklist.json` + `tmp-alpha-register.sh`; gitignored `scheduled_tasks.lock`. Agri4All upload tiles changed to re-render in place instead of full reopen. Extra countries added, AI autofill state fixed on reload, images split correctly across cards.<br><br>**PostPilot — media library + calendar.** Wave 2 media: MinIO + S3 client + uploader + library grid. Compose media picker (select from a client's library with ordered selection numbering and a link to manage library); upload-first media UX with library presented as a tab. Pivoted from a broken MinIO setup to local-fs storage on a persistent Coolify volume; REST `/api/upload` added, mirroring the `uploadMedia` server action. Calendar gained month + week + day views with drag-drop and an all-client master calendar; a +1-day shift fixed by bucketing posts by local date. Clients page got an archive confirmation modal with active/archived tabs. Connection & setup runbook written. |
| Sat 10 May | 2 | **Deliverables unlock.** Every wired deliverable type in `ENABLED_DELIVERABLE_TYPES` unlocked, with its dashboard, department tab, activity log, and portal audit wired end to end so each type renders on its destination tab instead of falling back to the generic view. |

| DATE | COMMITS | SUMMARY OF WORK SHIPPED |
|---|---|---|
| Sun 11 May | 15 | **Agri4All autofill rewrite + video request form.** Autofill description prompt + category enumeration rewritten; extras leakage fixed. Blank-line spacing and `<br>` handling added; contact-line labels and WhatsApp output dropped. The user-facing autofill wired to actually consume the new prompt. Spec + implementation plan for the rewrite committed to `docs/`. Client-level updates now propagate to sibling parent rows in the Agri4All linker. On the video side: all form steps populated via the booking-form fallback, a per-row "View Video Request Form" button added with checklist prefill, booking-form card live-sourced, dashboard moved to a 2-column layout, tabs scoped to the current delivery month, padding / title spacing tidied. Three stale copies of `dashboardTypes` + dispatch synchronised. |
| Mon 12 May | 8 | **Video department redesign continued.** Custom crew creation, invoice uploads on expenses, per-expense ledger sheet added. Pre-shoot checklist made fully editable (label edit, add, remove, with a key-based stable lookup). List view replaced with a Calendar Month grid as the default; Week view kept as a crew-load toggle. Department sheets capped at 70vh (48vh for stacked inbox) with internal scroll; dashboard container scrolling fixed so sheets can extend past the viewport. Initial visual rebuild of the video department shipped with the temperature palette and explicit status transitions. Stray `<br>` tags hidden in the Agri4All description textarea while preserved in the JSON payload sent to Alpha. |

## METHODOLOGY & VERIFICATION

Generated from the Git commit log of all repositories under `github.com/Danieldckh` with activity in May 2026, cross-referenced against Coolify deployment records. Repositories audited:

- **Danieldckh/Agri360** — the main ProAgri CRM (52 commits in May).
- **Danieldckh/postpilot** — new social-media scheduler monorepo (32 commits in May).
- **Danieldckh/secretary-transcribe** — deployed as `translate-transcribe.proagrihub.com` (3 commits in May).
- **Danieldckh/sitecraft-app** — no May activity (last push 16 April 2026).
- **Danieldckh/voice-over-agent** — no May activity (last push 14 April 2026).
- **Sister CRM repos** (`checklist-Agri360`, `Editable-booking-form`, `secure-signature-page`, `Booking-Form-Esign`, `Client-Lookup`) — no May activity; the April pipeline reshuffle has stabilised.

> **Scope note.** "Commits" counts merged work pushed to the default branch. It does *not* include design exploration, code review, deployment debugging, production hotfixes applied directly via Coolify, or work-in-progress branches that did not land. The true effort hour-count exceeds what 87 commits implies.
